

SENIOR SOFTWARE ENGINEER (SSE) - PHP

This is an exciting role in a fast-growing company. We are seeking an enthusiastic, technically sound and confident candidate to join our talented software engineering team and help us in the area of web development, specifically for PHP and related web development platforms. We are a startup with several successful projects under our belt already, and this is a rare chance for you to join our dynamic team and to become part of a great company and environment in its formative years.

Overview

You will help us in the end-to-end development of web products. You will demonstrate your dedication to the craft of writing code that you can be proud of. You will be required to write beautiful, fast PHP to a high standard, in a timely and scalable way that improves the code-base of our products in meaningful ways.

You will be working primarily on backend development, as part of a creative team that is responsible for all aspects of the ongoing software development from the initial specification, through to developing, testing and launching.

Job Responsibilities

- Write “clean”, well designed code
- Produce detailed specifications
- Troubleshoot, test and maintain the core product software and databases to ensure strong optimization and functionality
- Contribute in all phases of the development lifecycle

- Follow industry best practices
- Develop and deploy new features to facilitate related procedures and tools if necessary

Requirements

During the interview process and screening, you must demonstrate and provide references for the following requirements:

- Expertise in PHP, HTML, Java, CSS, HTML and other web technologies
- Experience with MVC frameworks including Laravel, CakePHP and Zend
- Experience in common third-party APIs and Interface Protocols and standards (JSON, SOAP, AJAX, JQUERY, Web Services, Twitter, Google Maps, Facebook, Ebay, PayPal, Amazon and others)
- Passion for best design and coding practices and a desire to develop new bold ideas
- Good knowledge of relational databases, version control tools and of developing web services including MySQL, SVN, Git etc.
- Familiarity with commonly used server platforms like Drupal etc.
- The ability to design and implement a solution based on customer requirements and scope document
- A passion for technology and a knack for details
- Excellent problem-solving skills, with the ability to design and devise logic on your own
- At least 2 years of professional experience in a similar role
- At least a BS degree in Computer Science, Engineering or a related subject
- A familiarity with mobile apps development platforms (iOS and Android), although not required, will be considered as a plus point
- Above all, a 'can do' attitude for all nature of work and the initiative to learn new technologies shall be fundamental in order to succeed at a startup
